SUMMARY

Full stack developer who has shipped paid products for real clients, including a clinic-management platform for a medical practice, built with React, Next.js, Node, and SQL. CS student at FAST NUCES (2027) targeting full stack or frontend roles.

EXPERIENCE

Frontend Developer Intern, FAST NUCES

June 2025 to August 2025

- Shipped the frontend of an algorithmic timetable generator used by 300+ students and staff, by building reusable React and TypeScript components with Tailwind CSS and managing schedule state through React Query
- Reduced manual schedule-correction time by roughly 40% by designing a conflict-resolution interface that auto-surfaced algorithm-generated clashes for one-click fixes, with the resolution logic covered by Jest and React Testing Library unit tests
- Delivered a deployed product on a 13-person cross-functional team, working in two-week Scrum sprints across design and engineering

Technical Content Creator

March 2024 to Present

- Grew a web-development teaching page to 20,000+ followers, then converted that audience into 10+ freelance inquiries and 2 paying clients
- Used the channel to teach React and frontend fundamentals, which sharpened how clearly I can explain technical work

Freelance Web Developer

January 2024 to Present

- Cut page load times by roughly 30% across 5+ client sites by building responsive React and Next.js front ends in TypeScript and shipping through a GitHub Actions deploy pipeline
- Lifted organic search traffic by roughly 25% on delivered sites by implementing SEO best practices including semantic HTML, meta optimization, and improved Core Web Vitals

PROJECTS

Patient Consultant Platform, Paid Client

- Built and shipped a full stack clinic-management platform for a paying medical practice, owning the build end to end across a React frontend and a Node, Express, and MySQL backend
- Delivered patient records, appointment scheduling, SMS-integrated messaging, and role-based authentication for clinic staff

Gym Management System, Sold to a Client

- Led a student team as technical lead on a full stack gym-management system, set the architecture, and wrote most of the codebase across frontend and backend
- Built member management, attendance, membership plans, and admin tools, then converted the semester project into a paid sale to a real gym

Tutorista, EdTech Landing Platform

- Designed and built a tuition-marketplace landing experience connecting students with verified educators, streamlining onboarding with role-based signup and minimal required fields to cut signup friction

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, Python, HTML, CSS
Frameworks and Libraries: React, Next.js, Node.js, Express.js, Electron.js, React Query, REST APIs
Styling: Tailwind CSS, Bootstrap, SASS, styled-components
Databases: MySQL, MS SQL, MongoDB
Testing and DevOps: Jest, React Testing Library, Git, GitHub, GitHub Actions, Vercel, Postman
Design: Figma, Photoshop, Canva

EDUCATION

FAST NUCES | BS Computer Science | 2023 to 2027
Kinnaird College | ICS Physics and Computer Science | 2021 to 2023

CERTIFICATIONS AND LANGUAGES

Certifications: Basic SQL (HackerRank) **Spoken Languages:** English, Urdu
